Construction Staking

CivilArts is seasoned in construction staking and provides grade and alignment stakes for nearly any construction application.

We recognize the importance of a quick response to construction staking requests and have the resources to schedule accordingly. Our project managers are responsible for every facet of staking operations and provide continual coordination between field crews, construction contractors, and design professionals to insure the job gets done correctly and on schedule.

CivilArts employs experienced field crews and state-of-the-art RTK GPS and conventional survey technologies. Prior to staking, we provide high precision horizontal and vertical control stations at key locations throughout the site to facilitate efficient staking.

CivilArts also provides support services for engineering and architectural design and post-construction as-builts and verification.

CivilArts provides Construction Staking for:

- Residential Subdivisions
- Commercial Subdivisions
- Building Sites
- Roads & Bridges
- Earthwork
- Utilities
- Paving
- Concrete
- Home Builders

- Engineering
- Planning
- Surveying
